INDEX

Ex. No:1	InstallationOfHadoopFramework
Date: 9/8/2024	

AIM:

InstallationofHadoopFramework,it‘scomponentsandstudytheHADOOP ecosystem

Hadoop is an open-source framework that allows to store and process big data in a distributed environment across clusters of computers using simple programming models. It is designed to scaleupfromsingleserverstothousandsofmachines,eachofferinglocalcomputationandstorage.

HadoopArchitecture:

TheApacheHadoopframeworkincludesfollowingfourmodules:

HadoopCommon:

Contains Java libraries and utilities needed by other Hadoop modules. These libraries give file system and OS level abstraction and comprise of the essential Java files and scripts that are required to start Hadoop.

Hadoop Distributed File System (HDFS): A distributed file-system that provides highthroughput access to application data on the community machines thus providing very high aggregate bandwidth across the cluster.

Hadoop YARN: A resource-management framework responsible for job scheduling and cluster resource management.

HadoopMapReduce:ThisisaYARN-basedprogrammingmodelforparallelprocessingoflarge data sets.

HadoopInstallationprocedure:

Step 1: Download and install Java

https://www.oracle.com/java/technologies/javase-downloads.html

Step 2: Download Hadoop

https://hadoop.apache.org/releases.html

Step3: SetEnvironmentVariables

Step4: SetupHadoop

oumustconfigureHadoopinthisphasebymodifyingseveralconfigurationfiles.Navigatetothe “etc/hadoop” folder in the Hadoop folder. You must make changes to three files:

core-site.xml

```
<configuration>
<property>
<name>fs.default.name</name>
<value>hdfs://localhost:9000</value>
</property>
</configuration>
```

hdfs-site.xml

```
<configuration>
<property>
<name>dfs.replication</name>
<value>1</value>
</property>
<property>
<name>dfs.namenode.name.dir</name>
<value>file:/hadoop-3.3.1/data/namenode</value>
</property>
<property>
<name>dfs.datanode.data.dir</name>
<value>file:/hadoop-3.3.1/data/datanode</value>
</property>
</configuration>
```

mapred-site.xml

```
<configuration>
<property>
<name>mapred.job.tracker</name>
<value>localhost:54311</value>
</property>
</configuration>
```

Step5:FormatHadoopNameNode

hadoopnamenode–format

Step6:StartHadoop

start-all.cmd

Step7:VerifyHadoopInstallation

http://localhost:50070/.

Ex. No:2	FileManagementtasksinHadoop
Date: 23/8/2024	

AIM:

ToperformvariousfileoperationinHDFS

Step1:AddingFilesandDirectoriestoHDFS

BeforerunningHadoopprogramsondatastoredinHDFS,thedataneedstobeaddedtoHDFS. Let's start by creating a directory and adding a file to it.

1. **Createadirectoryin HDFS:**

   `hadoopfs-mkdir/user/myfile`

   Thiscommand createsanewdirectorynamed`myfile`inthe`/user`directoryin HDFS.

2. **AddafiletoHDFS:**

   `hadoopfs-puta.txt`

   Thiscommanduploadsthefile`a.txt`fromthelocalfilesystemtotherootdirectoryof HDFS.

3. **Addthefiletothenewlycreated directory:**

   `hadoopfs-puta.txt/user/myfile`

   Thiscommanduploadsthefile`a.txt`fromthelocalfilesystemdirectlyinto the `/user/myfile` directory in HDFS.

Step2:RetrievingFilesfromHDFS

TocopyfilesfromHDFS backtothelocalfilesystem,usethegetcommand.Here'showto retrieve a.txt:

hadoopfs-cata.txt

Thiscommanddisplaysthecontentsofthefilea.txtdirectlytotheconsole.Toactuallycopythe file to the local filesystem, you would use:

hadoopfs-geta.txt/local/path

Replace/local/pathwiththedesiredpathonyourlocalfilesystem.

Step3:DeletingFilesfromHDFS

TodeleteafilefromHDFS,usetherm command.Here'showtodeletea.txt:

hadoopfs-rma.txt

Thiscommandremovesthefilea.txtfromHDFS.

Output

Thesuccessfulexecution oftheabovecommandswillresultinthefollowing:

- Creationofthe/ user/myfiledirectory in HDFS.
- Addition of a.txt toHDFSandthento /user/myfile
- Retrievalof a.txt fromHDFStothelocalfilesystem.
- Deletionofa.txt fromHDFS.

Ex. No:3	ImplementwordcountprogramusingMapReduce
Date: 30/8/2024	

AIM:

ToimplementingdistinctwordcountproblemusingMap-Reduce

Thefunctionofthemapperisasfollows:

• Createa IntWritablevariable'one'withvalueas1

• ConverttheinputlineinTexttypeto aString

• Useatokenizertosplitthelineintowords

• IteratethrougheachwordandaformkeyvaluepairsasAssigneachworkfromthetokenizer (of String type) to a Text 'word'

• Formkeyvaluepairsforeachwordas<word,one>andpushittotheoutput collector

ThefunctionofSortand Group:

Afterthis,"aggregation"and"ShufflingandSorting"donebyframework. Then Reducers task these final pair to produce output.

Thefunctionofthereducerisasfollows

• Initializeavariable'sum'as0

• Iteratethrough all thevalueswithrespecttoakeyandsumupallof them

• PushtotheoutputcollectortheKeyandtheobtainedsumasvalue For Example:

Forthegivensampleinput1 datafile(input1.txt:Hello WorldByeWorld) mapperemits:

<Hello,1>

<World,1>

<Bye,1>

<World,1>

Thesecondinput2datafile(input2.txt:HelloHadoopGoodbyeHadoop)mapperemits:

<Hello,1>

<Hadoop,1>

<Goodbye,1>

<Hadoop,1>

WordCountalsospecifiesacombiner.Hence,theoutputofeachmapispassedthroughthelocal combiner(whichissameastheReducerasperthejobconfiguration)forlocalaggregation,after being sorted on the keys.

Theoutputofthefirst map:

<Hello,1>

<Bye,1>

<World,2>

Theoutputofthesecondmap:

<Hello,1>

<Hadoop,2>

<Goodbye,1>

TheReducerimplementationviathereducemethodjustsumsupthevalues,whicharethe occurence counts for each key (i.e. words in this example).

Thustheoutputofthejobis:

<Goodbye,1>

<Bye,1>

<Hello,2>

<Hadoop,2>

<World,2>

AggregateFunctions

Hivesupportsthefollowingbuilt-in**aggregatefunctions**.Theusageofthesefunctionsisassameastheusual SQL aggregate functions.

ReturnType	Signature	Description
BIGINT	count(*), count(expr),	count(*)-Returnsthetotalnumberofretrieved rows.

DOUBLE	sum(col), sum(DISTINCTcol)	Itreturnsthesumoftheelementsinthegroupor the sum of the distinct values of the column in the group.
DOUBLE	avg(col), avg(DISTINCTcol)	It returns the average of the elements in the grouportheaverageofthedistinctvaluesofthe column in the group.
DOUBLE	min(col)	Itreturnstheminimumvalueofthecolumnin the group.
DOUBLE	max(col)	Itreturnsthemaximumvalueofthecolumnin the group.

CreatinganIndex

AnIndexisnothingbutapointeronaparticularcolumnofatable.Creatinganindexmeanscreatingapointerona particular column of a table. Its syntax is as follows:

```
CREATEINDEXindex_name
ONTABLEbase_table_name (col_name,...) AS
'index.handler.class.name'
[WITHDEFERREDREBUILD]
[IDXPROPERTIES (property_name=property_value, ...)]
[IN TABLE index_table_name]
[PARTITIONEDBY(col_name,...)] [
  [ROWFORMAT...]STOREDAS...
  |STOREDBY...
]
[LOCATIONhdfs_path]
[TBLPROPERTIES(...)]
```

Example

Letustakeanexampleforindex.Usethesameemployeetablethatwehaveusedearlierwiththefieldsld,Name, Salary, Designation, and Dept. Create an index named index_salary on the salarycolumn of the employee table.

Thefollowingquerycreatesanindex:

```
hive>CREATEINDEXinedx_salaryONTABLEemployee(salary)
AS'org.apache.hadoop.hive.ql.index.compact.CompactIndexHandler';
```

Itisapointertothesalarycolumn.Ifthecolumnismodified,thechangesarestoredusinganindexvalue.

DroppinganIndex

Thefollowingsyntaxisusedtodropanindex:

DROPINDEX<index_name>ON<table_name>

Thefollowingquerydropsanindexnamedindex_salary:

hive> DROP INDEX index_salary ON employee;

ToexportdatafromHadoopusingSqooptoimportdatatoHive**.**

ToexportdataintoMySQLfromHDFS,performthefollowingsteps:

Step1: Createadatabaseand tableinthe hive.
createtablehive_table_export(namestring,companystring,phoneint,ageint)rowformat delimited fields terminated by ‘,’;

```
Applications  Places  System
Browse and run installed applications                cloudera@quickstart:~
File  Edit  View  Search  Terminal  Help
hive> create database hive_export;
OK
Time taken: 0.083 seconds
hive> use hive_export;
OK
Time taken: 0.034 seconds
hive> create table hive_table_export(name string,company string, phone int, age int);
OK
Time taken: 0.164 seconds
hive>
```

HiveDatabase:hive_exportandHiveTable:hive_table_export

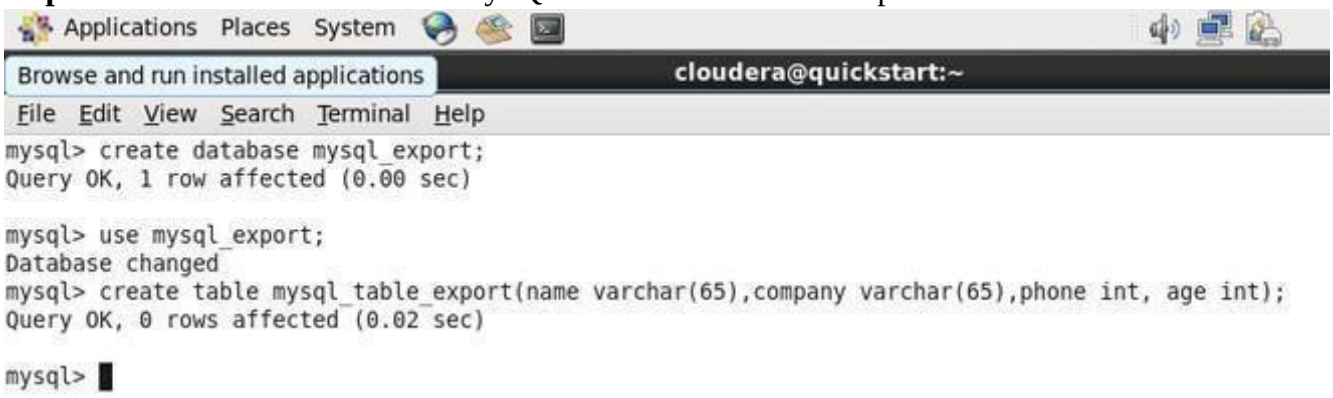
Step2: Insertdataintothehivetable.

```
insertintohive_table_exportvalues("Ritik","Amazon",234567891,35);
```

```
Applications  Places  System
Browse and run installed applications
File  Edit  View  Search  Terminal  Help
hive> select * from hive_table_export;
OK
Rohan   GeeksforGeeks   123456789       21
Ritik   Amazon  234567891       35
Pratham Barclays        345678912       27
Time taken: 0.17 seconds, Fetched: 3 row(s)
hive>
```

Data inHivetable

Step3: Createadatabaseand tableinMySQLinwhichdatashouldbeexported.



MySQLDatabase:mysql_exportandMySQLTable:mysql_table_export

Step4: RunthefollowingcommandonHadoop.

```
sqoop export --connect \
jdbc:mysql://127.0.0.1:3306/database_name_in_mysql \
 --tabletable_name_in_mysql\
 --usernameroot--passwordcloudera\
 --export-dir/user/hive/warehouse/hive_database_name.db/table_name_in_hive\
 --m1\
 --drivercom.mysql.jdbc.Driver
 --input-fields-terminated-by','
```

```
[cloudera@quickstart ~]$ sqoop export --connect jdbc:mysql://127.0.0.1:3306/mysql_export  --table mysql_table_export  --usern
ame root --password cloudera  --export-dir /user/hive/warehouse/hive_export.db/hive_table_export  --m 1  --driver com.mysql.j
dbc.Driver --input-fields-terminated-by ','
